

Integration with Sage Intacct

Today's modern business environment is increasingly complex. Rapidly changing economic conditions, increasing regulatory guidelines, competitive pressures, and ever-growing amounts of data to analyze mean that timely access to your financial and operational data and the ability to quickly model and reforecast your business are critical. Yet, at the same time, businesses are constantly being challenged to do more with less.

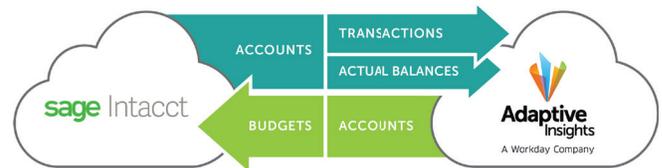

The Adaptive Insights Business Planning Cloud addresses these issues by enabling the entire business planning process, including modeling, reporting, analysis, and scenario planning for individual functions and the business as a whole so everyone can quickly adapt to changing business conditions and make smarter decisions faster.

The Data Challenge

Access to data that is both timely and accurate is a crucial differentiator for businesses and vital for decision-makers who must quickly respond to changing economic conditions and drive strategic initiatives.

However, the data needed for your planning and forecasting process is not necessarily contained all within a single system. In addition to Sage Intacct, chances are that your company data is spread among various other cloud applications such as Salesforce, ADP, etc. Some planning data may even be in legacy, on-premises systems or various Excel spreadsheets.

By using the Adaptive Insights integration framework to connect their Sage Intacct data as well as other data sources to the Business Planning Cloud, companies are able to operate with complete confidence that every

Accelerate your planning and reporting processes by automating the import and export of actuals and budgets between Sage Intacct and Adaptive Insights.

decision made and every resource allocated is based on the most accurate and up-to-date information available.

Easy

Starting with over 250 out-of-the-box Sage Intacct data elements and access to data from additional custom tables, business analysts and data designers can easily define which data objects to import, perform necessary data transformations, and automate scheduled data loads from their Sage Intacct or other source systems.

The Adaptive Insights integration framework supports out-of-the-box transformations such as changing signs or skipping accounts, in addition to lightweight data preparation and filtering available through the integration staging area.

Powerful

Powerfully manage data integration across multiple data sources in a self-service, click-not-code experience. Load data into a common staging area where data can be merged, manipulated, transformed, filtered, and reformatted before loading the transformed data into any part of the Business Planning Cloud.

Fast

The Adaptive Insights integration framework simplifies and automates data imports and mappings across multiple data sources, whether importing a spreadsheet or directly integrating from a cloud or on-premises business application. In addition, purpose-built integration for Sage Intacct speeds connectivity to Sage Intacct data so that the latest data is always at hand.

Secure

A data designer is able to enter credentials and connect, for example, to a specific Sage Intacct account. The data designer can begin the mapping process and quickly import those tables associated with the Sage Intacct account. The data designer can grant launch or edit permissions to other users selectively.

Benefits

- Access and configure connectivity to any source system
- Get started fast with out-of-the-box definitions for common Sage Intacct data objects
- Leverage Sage Intacct Web Services to provide up-to-date information about Sage Intacct objects
- Auto-map source accounts, level, and dimensions to Adaptive Insights entities
- Automate data integration processes to optimize operations
- Get notifications of status of integration tasks
- Provide secure access with user-based permissions

Working together, Sage Intacct and Adaptive Insights have helped more than 150 high-performance teams achieve better business results by transforming their planning, forecasting, and budgeting process into one that is collaborative, comprehensive, and continuous.

About Adaptive Insights

At Adaptive Insights, a Workday company, we're powering a new generation of business planning. We recognize that in business, everybody plans, but traditional planning is too hard and too slow for today's agile businesses. So we built the Adaptive Insights Business Planning Cloud, which enables more than 4,000 organizations around the world to transform the planning process into a strategic advantage. With powerful modeling that's easy for everybody who plans, our Business Planning Cloud platform enables organizations of all sizes to adapt to changing business conditions with confidence and agility. Adaptive Insights is headquartered in Palo Alto, CA. Learn more at www.adaptiveinsights.com.
